### Listing of Claims

Claim 1 (currently amended): A fiber optic polarizer comprising:  
a chuck defining a groove in a face along a lengthwise direction thereof;  
a single mode fiber installed on the face around one end of said groove;  
a polarization-maintaining fiber installed on the face around the other end of  
said groove; and

a polarization beamsplitter disposed between said single mode fiber and said  
polarization-maintaining fiber; and

a box hermetically enclosing the chuck and the polarization beamsplitter with  
portions of the single mode fiber and polarization-maintaining fiber exposed to an  
exterior; wherein

the polarization beamsplitter is positioned to respectively align with the single  
mode fiber and the polarization-maintaining fiber at two opposite ends thereof to  
allow unpolarized light from the single mode fiber to enter the polarization  
beamsplitter at one end thereof and an o-ray of a polarized light to leave the  
polarization beamsplitter toward the polarization-maintaining fiber.

Claim 2 (original): The polarizer as defined in claim 1, wherein the said  
polarization beamsplitter is fixed to a wafer above the chuck.

Claim 3 (cancelled)

Claim 4 (original): The polarization as defined in claim 1, wherein said  
groove is V-shaped, and both the single mode fiber and the polarization-  
maintaining fiber are fixed thereto.

Claim 5 (currently amended) A method of polarizing an unpolarized light,  
comprising the steps of:

Appl. No. 09/927,206

Reply to Office Action of October 6, 2003

providing a box enclosing a chuck with a through V-groove along a lengthwise direction thereof, and a wafer above said chuck;

installing a single mode fiber in said V-groove around one end thereof;

installing a polarization-maintaining fiber in said V-groove around the other end thereof;

fixing a polarization beamsplitter to the wafer, and between and in alignment with said single mode fiber and said polarization-maintaining fiber; and

having the unpolarized light enter said box via said single mode fiber and through said polarization beamsplitter, and having only an o-ray of a polarized light leave said box via said polarization-maintaining fiber.
